Building Reports, Dashboards, and Custom Pages (UI Builder) for the Student Admission Enquiry Management Application in Zoho Creator

S.Thavasakthi – B.Tech Computer Science and Business System

AIM

To design and build custom reports, an interactive dashboard, and dashboard widgets using Zoho Creator's Reports module and Dashboard Builder for the Student Admission Enquiry Management application, so that the Admission Cell can visualize enquiry trends, filter prospective-student records by course and gender, and track follow-up status at a glance, layered on top of the base Admission_Enquiry_Report.

PROCEDURE

The Admission Cell's information needs were reviewed against the existing Admission_Enquiry_Form data, identifying the need for a course-wise pipeline view, a spreadsheet-style master list of all captured fields, and an at-a-glance dashboard summarising enquiry status and gender distribution.

From the Reports panel, two custom report views were built on top of Admission_Enquiry_Form data: a Kanban View grouped by Preferred_Course, giving the Admission Cell one column per programme — B.Tech - AI & Data Science, B.Tech - Computer Science and Engineering, B.Tech - Electronics and Communication Engineering, and B.Tech - Information Technology — with each card showing the applicant's Student_Name and Date_Of_Birth for quick scanning; and a spreadsheet (List View) report displaying every captured Basic Field as a column — Student_Name, Date_Of_Birth, Gender, Email_Address, Contact_Number, Residential_Address, and Class_XII_Percentage — so the office can search and sort the complete enquiry record.

A dashboard, Admission_Enquiry_Dashboard, was then created from the Dashboards panel. Working in the Dashboard Builder, widget cards were dragged in from the gallery and bound to the Admission_Enquiry_Report: two KPI widgets for quick top-line metrics, a Column Chart plotting Class_XII_Percentage against Date_Of_Birth to show the academic-score spread of applicants, a Semi Donut chart segmenting applicants by Date_Of_Birth, and a Donut chart segmenting applicants by Contact_Number so each caller can be identified by colour at a glance.

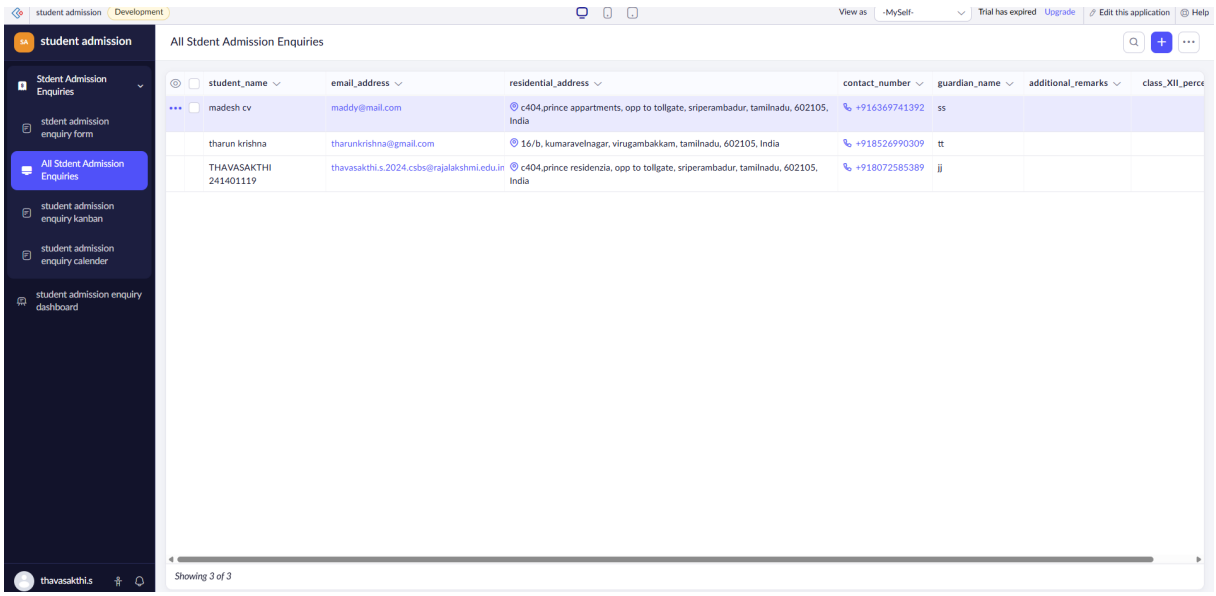

A second dashboard page was added for status tracking. Two Donut Chart widgets were configured — Enquiry Status (grouped into New, Follow-up, and Unknown segments) and Gender-wise Enquiries (grouped by Gender) — alongside a Kanban Board widget summarising live counts of enquiries in the New and Follow-up stages, giving the front office a real-time snapshot of how many applicants still need a call-back.

Each widget was configured through the Dashboard Builder's left-hand panel (Panel, Board, Chart, Gauge, Form, Report, Button, Widgets, Viewer elements) by selecting the widget type, binding it to Admission_Enquiry_Report or Admission_Enquiry_Form as the data source, and then setting the grouping/aggregation field (e.g. Preferred_Course for the Kanban Board, Gender for the Gender-wise Enquiries donut) before the placeholder Ct() counts resolved to live figures.

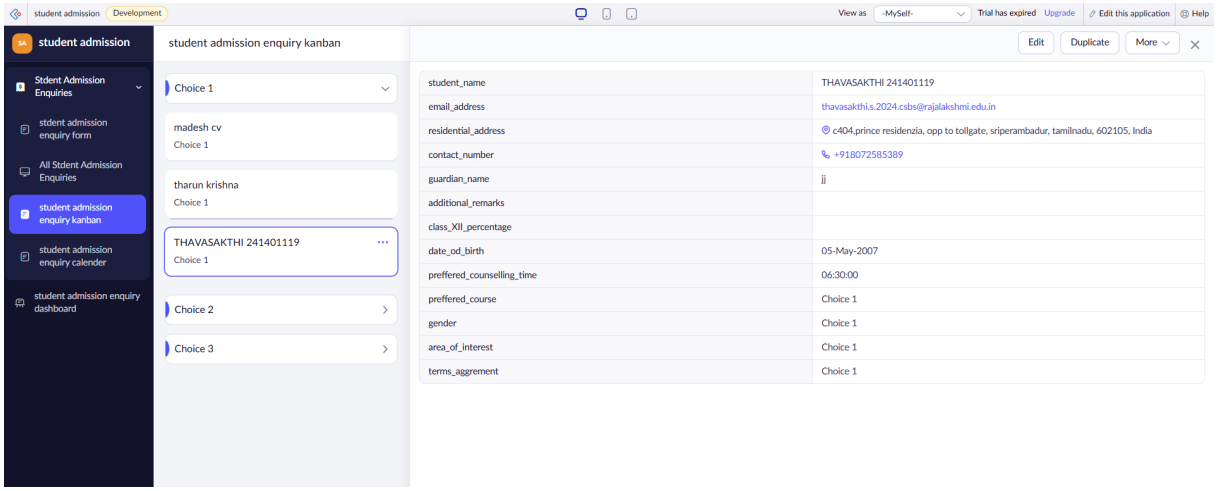

Finally, the reports and dashboard were previewed to confirm all widgets, chart segments, and Kanban columns rendered correctly against live submitted records, and the application was saved with edit access restricted to the Admission Cell administrators.

OUTPUT

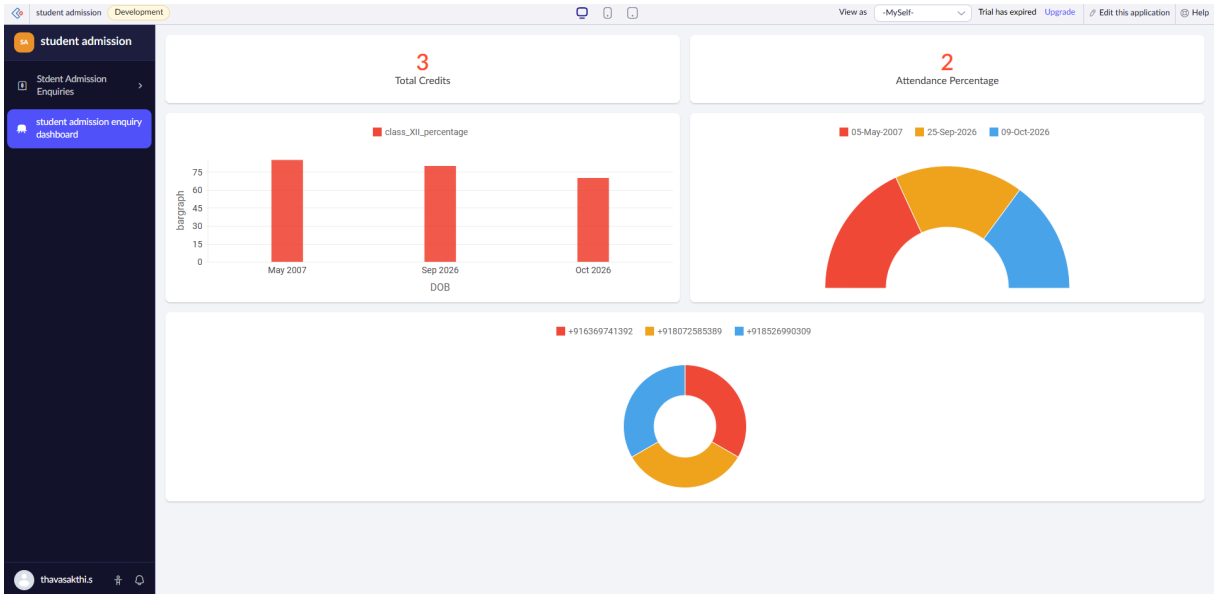

The following screenshots capture the completed reporting layer: the Kanban view and spreadsheet report, the live Admission_Enquiry_Dashboard, and the Dashboard Builder with widgets configured.

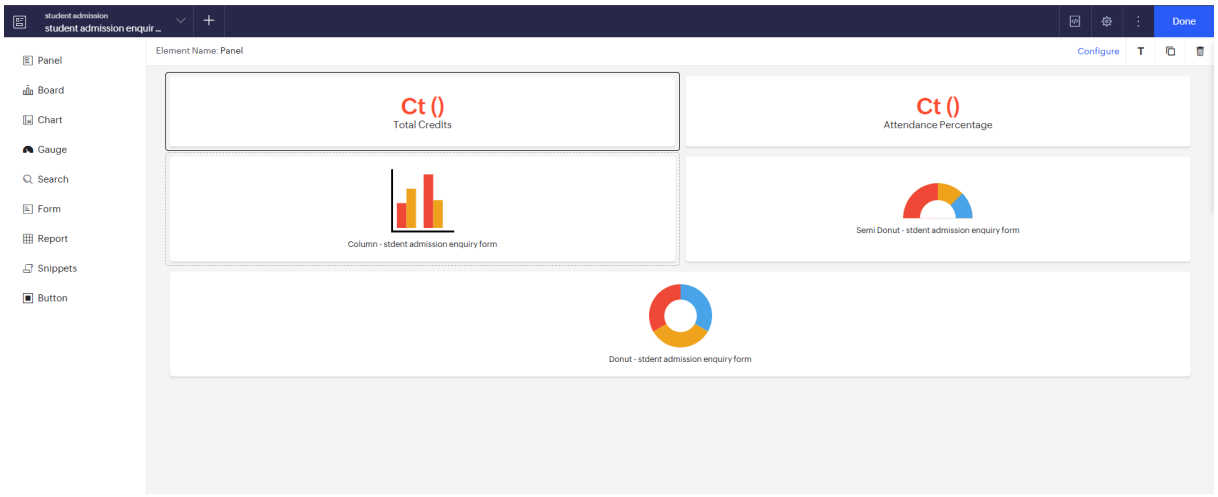

The spreadsheet (List View) report — All Stdent Admission Enquiries.

The Kanban view of the Stdent Admission Enquiries report.

The live view of the student admission dashboard, showing the Total Credits and Attendance Percentage KPI widgets, the column chart, the semi donut, and the donut widget.

The Dashboard Builder panel, showing the widget gallery used to add the Column, Semi Donut and Donut widgets, with the widgets bound and configured before publishing.

RESULT

Custom report views, an interactive dashboard, and supporting dashboard widgets were successfully built in Zoho Creator for the Student Admission Enquiry Management application using the platform's Reports module and Dashboard Builder. A Kanban Board grouped by Preferred_Course and a spreadsheet report listing all thirteen Basic Fields were configured to match the Admission Cell's day-to-day needs; a dashboard combining KPI, column, semi donut, and donut widgets was built on top of these reports; and a second dashboard page summarising Enquiry Status and Gender-wise Enquiries was assembled to give the front office a real-time follow-up tracker. The exercise thus demonstrated how raw form data captured through the Admission_Enquiry_Form can be progressively layered into reports and dashboards to support a real front-office admissions workflow.
